EDUCATION

California Polytechnic, Pomona

B.S., Computer Information Systems

August 2023 – December 2024

Transferred to CBU

California Baptist University

B.S., Computer Science with specialization in Machine Learning and AI

February 2025 – Present

Relevant Coursework: Artificial Intelligence, Machine Learning, Algorithms & Data Structures, Discrete Mathematics, Statistics, Networking, Database Systems, Operating Systems

TECHNICAL SKILLS

Languages: Python, C#, Java, JavaScript, TypeScript, SQL, Bash, HTML/CSS, XAML

Frameworks & Libraries: .NET / WPF / MAUI, React.js, Node.js, Pandas, NumPy, scikit-learn, Swing/AWT

Tools & Technologies: AWS, Git, Basler, Pylon Viewer, Docker, Azure AD / Office 365, REST APIs, Google Colab, Atlassian

Concepts: Machine Learning, Computer Vision, OCR, MVVM, OOP, Data Structures & Algorithms, Multithreading

EXPERIENCE

ORMCO

December 2025 – Present

Software Engineering Intern

Pomona, CA

- Developed and deployed production .NET WPF (MVVM / C# / XAML) applications used by manufacturing line operators worldwide, increasing operator efficiency by 80%
- Paperless – Digitized the entire work order manufacturing lifecycle using .NET, MSSQL, and AWS S3, eliminating hundreds of pages of daily paperwork and reducing order processing time by over 50%
- Barmold AQI (Automated Quality Inspection) – Built a C# communication layer enabling real-time command and status handshaking between application software and a Universal Robots (UR) arm
 - Developed a computer-vision pipeline with Basler cameras and Pylon Viewer to locate mold positions on trays, enabling the robot to autonomously pick molds without manual inspection
 - Trained and integrated an OCR model to classify mold defect states and tray conditions (present/absent, full/empty), automating quality-control decisions at the point of inspection
 - Centralized configuration by refactoring environment variables into REST calls to a Flask service, enabling runtime updates without redeployment

ALFA Business

May 2025–December 2025

IT Technician

Riverside, CA

- Delivered Tier 1–3 support for hardware, networking, and software across 200+ users in Windows and macOS environments
- Managed Office 365/Azure AD environments for 10+ companies, streamlining user provisioning and onboarding/offboarding workflows
- Built automation scripts in Bash, PowerShell, and Java to cut manual IT workload including antivirus detection, system and SQL-server performance monitoring, and firewall configuration tools

PROJECTS

Pacman AI – Python

- Python Implemented DFS, BFS, UCS, and A* search algorithms to autonomously navigate complex mazes, reducing state-space exploration from 620 to 14 nodes while preserving solution optimality

Acquisition Robot – EV3 Mindstorms, AutoCAD, SolidWorks

- Engineered a button-controlled robotic arm to retrieve and transfer objects, designing custom components in AutoCAD and SolidWorks from LEGO, 3D-printed, and acrylic materials. Diagnosed retrieval failures as a mechanical grip limitation and redesigned the scoop, raising success rate to 99% across 100+ test cycles

Asteroids Game – Java, Swing, AWT

- Built a multiplayer space-shooter with three game modes (Single-Player, Competitive, Co-op); architected a multi-threaded engine with 9 concurrent threads managing collision detection, physics-based movement, player input, and enemy AI

Book App – React, TypeScript, Tailwind CSS, SQL, ESV API

- Built a full-stack cross-platform Bible app in React / TypeScript with user authentication, verse highlighting, note-taking, and daily-streak tracking, backed by a SQL database. Integrated the ESV translation API and deployed to desktop, iOS, and Android from a single shared codebase.
